How do we support Remote Peering?

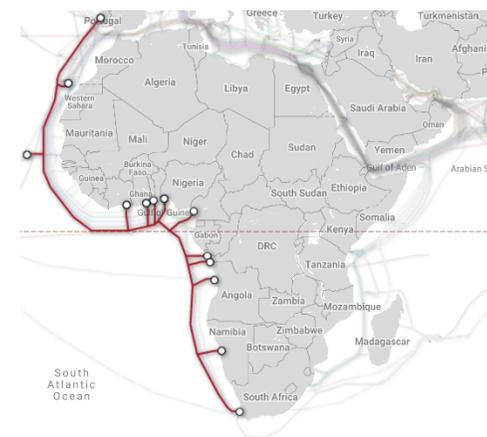

MONET
24Tbps

SACS
40Tbps

WACS
14Tbps

Definitions...

- Remote Peering gives a network the ability to peer without any physical presence near the peering-fabric (no colocation costs or X-connect costs);
- A Remote Peering provider is an entity that sells / provides another network to reach a peering-fabric across their transport infrastructure.

Benefits...

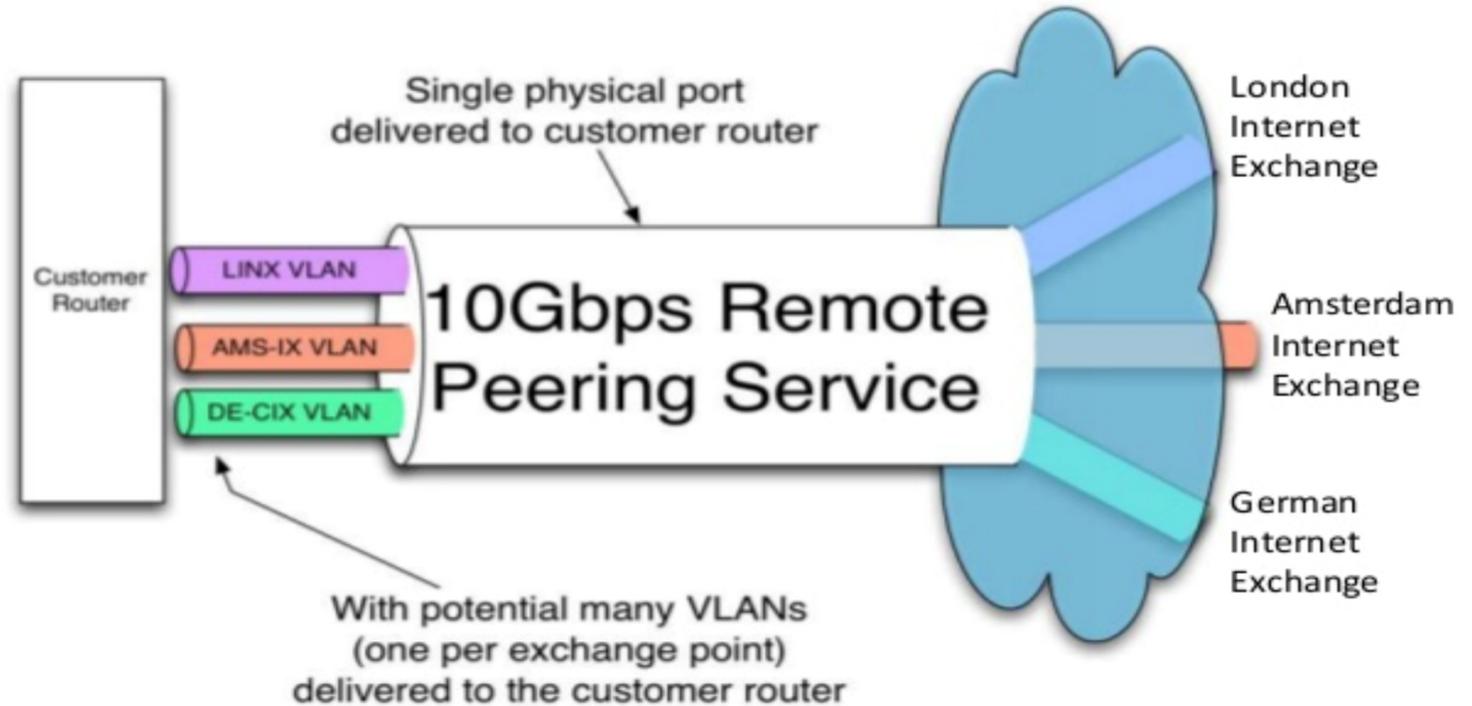

- No capital costs;
- Instant turn-up;
- More control over routing;
- Connect to the CORE from your “region”;
- Multiple VLANS over a “single-interface”;
- “Autonomy” on whom to peer at an exchange point.

How to interconnect?

- Customer(s) can use a single-interface with multiple VLAN's to different IX's

One-to-many Remote Peering Service Model

Interconnect locations

Angola Cables Interconnect locations are at:

<https://www.peeringdb.com/net/4894>

Facility ▼ ASN	Country City
Angola Cables Luanda POP 37468	Angola Luanda
